Topics

- Pre-cloud IoT system components.
 - Networks
 - Gateways
 - End nodes
 - Sensors
 - Actuators
- Communication methods, protocols, and technologies.
- Components interfacing
 - Digital
 - Analog
 - Serial protocols (UART, I2C, SPI, ...)
 - Wireless protocols (Wi-Fi, Bluetooth, ZigBee, LoRa)
 - Application protocols (HTTP, MQTT).
- Electrical principles and tools (Voltage, Current, Resistivity).
- TinkerCad
- Arduino overview
 - Hardware Overview (Pinout, Models, ...)
 - Arduino IDE
 - Review basic programming concepts (loops, conditions, functions, ...)
 - Libraries
 - Pins interfacing (digital, analog, ...)
 - Timing functions
 - Serial functions (Serial, Wire, SPI, OneWire)
- Raspberry Pi overview
 - Hardware Overview (Pinout, Models, ...)
 - Installing Raspberry Pi OS (previously Raspbian)
 - Simple LED controlling
 - CLI basics and software management (install, update, ...)
 - Node-RED installing
- ESP8266 (Arduino Based)
 - HTTP Client
 - HTTP Server
 - MQTT Client
- Node-Red
- Miscellanies
 - Using Multimeter
- JSON

Topics (Optional)

- PWM
- PCB design
- ESP8266 (AT command based)
- Datasheets
- Waveforms, Oscilloscope and Logic analyzer
- Pull-Up and Pull-Down
- Raspberry Pi
 - SSH access
 - VNC
 - Python and GPIO
 - Controlling HW (GPIO and other ports) using filesystem

- RFID

SUMMER TRAINING

Voltage

Voltage is the difference in charge between two points.

Current (Amperage)

Current

Current is the rate at which charge is flowing.

Current (Amperage)

Resistance

Resistance is a material's tendency to resist the flow of charge (current).

“V” is for Voltage

“I” stands
for current.
It just does.

“R” is for Resistance

- **Voltage**, measured by **volts[v]** (V)
- **Current**, measured by **amps[I]** (A)
- **Resistance**, measured by **ohms[R]** (Ω)

IR

??

📱 @taibahvalley

SUMMER TRAINING

How I memorize it

$$V = IR$$

📍 saudi arabia | madina
☎ +966 14 861 8888
🌐 taibahvalley.com.sa
📱 @taibahvalley

SUMMER TRAINING

Voltage = Current x Resistance

Resistance = Voltage / Current

Current = Voltage / Resistance

Resistors

Resistors

- The resistor is the real-world component that has resistance.
- Resistors comes in many values, and its values are marked using color bands (4, 5 or 6 bands).

2.2 K Ω = 2200 Ω

470 Ω

10 K Ω = 10 000 Ω

- It is represented by the symbol

Experiment time!

$$P = IV$$

<- leave that in your mind

SUMMER TRAINING

Quick tips to save your time

📍 saudi arabia | madina
☎ +966 14 861 8888
🌐 taibahvalley.com.sa
📱 @taibahvalley

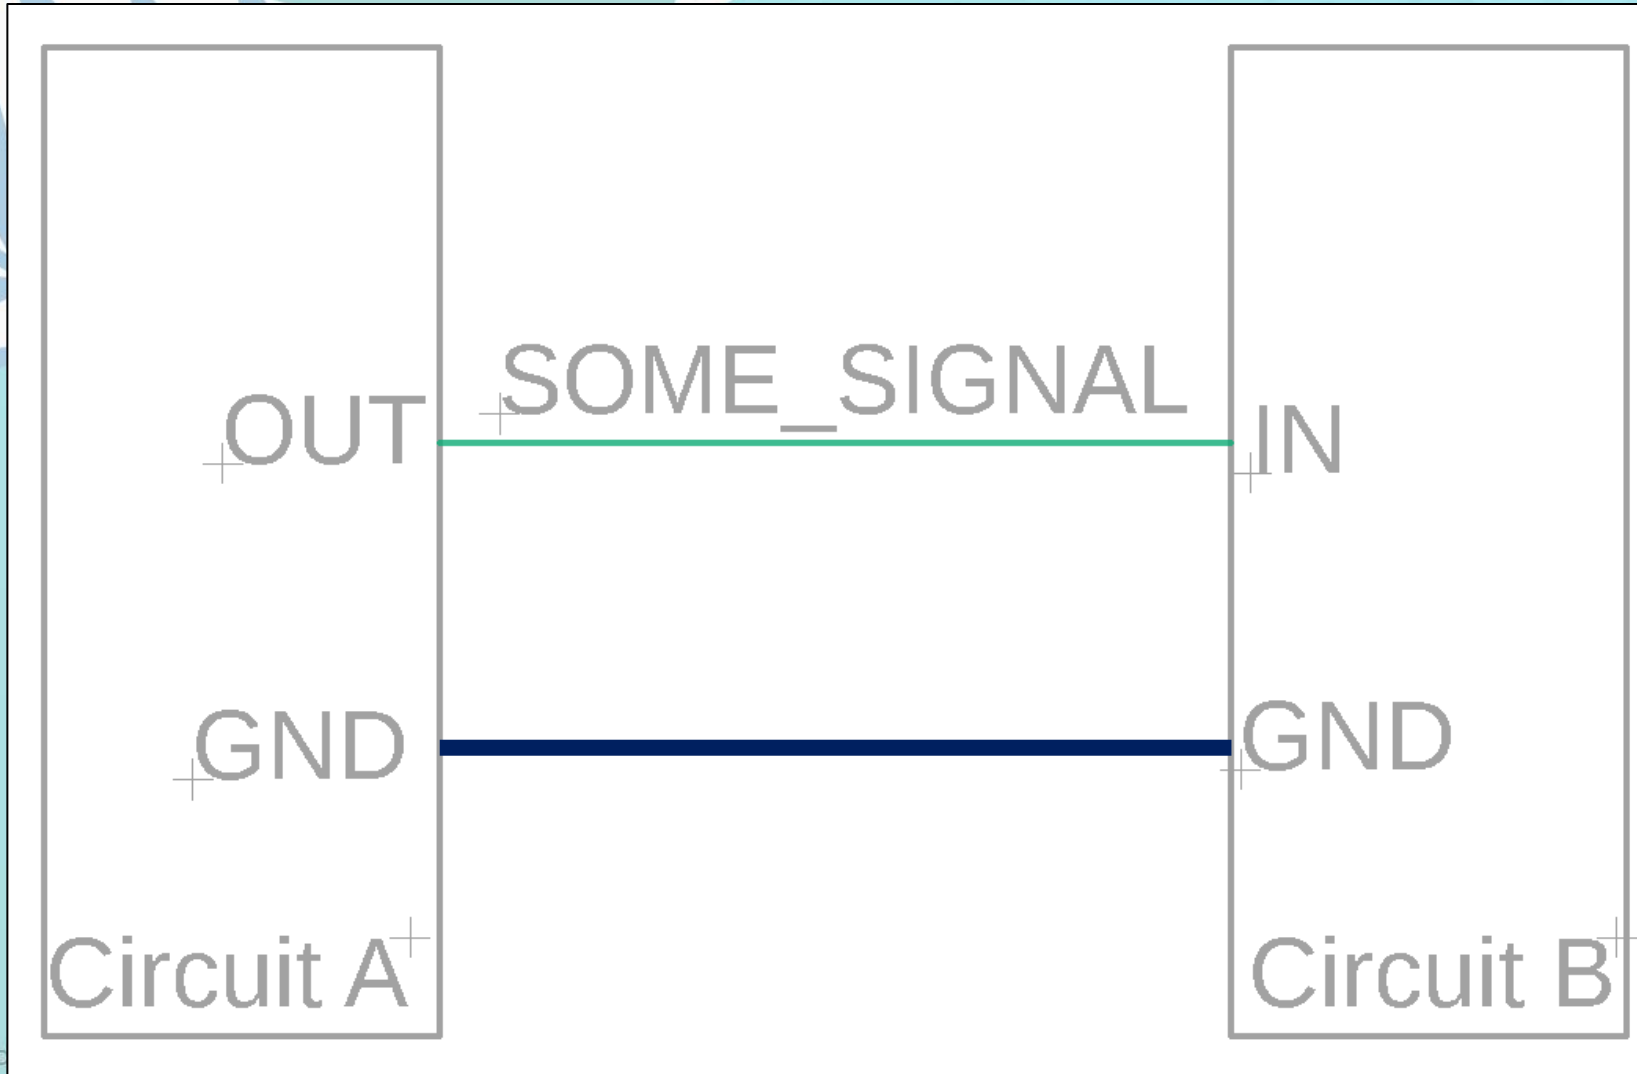

SUMMER TRAINING

Pull-up Pull-down

When a line is **Floating**, you can't guarantee its reading, which may cause problems for the sensitive devices or increase power consumption.

GND

If there are circuits that share signals, mostly likely it is necessary to share the same GND (ground) between both circuits.

SUMMER TRAINING

📱 @taibahvalley

Multimeter

- A device to measure basic electrical quantities
- Essential tool when working with electronics
- Can be used in circuits diagnosing and verifying components.

📍 saudi arabia | madina

☎ +966 14 861 8888

🌐 taibahvalley.com.sa

📱 @taibahvalley

SUMMER TRAINING

Microcontrollers

But,

- What exactly is MCU?

It is this one

NOT this one!

SUMMER TRAINING

📍 saudi arabia | madina

☎ +966 14 861 8888

🌐 taibahvalley.com.sa

🐦 📘 🌐 📺 @taibahvalley

Microcontrollers (MCU)

Tasks

- DC Motor circuit
 - Connect directly to power source
 - Connect using transistor (2N2222 or TIP120)
- LED and DC motor circuit using push buttons
 - One push button turns on both of Motor and LED
- Resistors Identification
 - What are the colors of the following resistors (4-Colors)?
 - 220Ω
 - 470Ω
 - 1KΩ
 - 1.2KΩ
 - 4.7KΩ
 - 100KΩ
